Acer Aspire laptop won't turn on but it is charging? It got badly infected as they went to a bad site and did a download. Bottom line, I need to hard reset the BIOS and reformat and reinstall Windows. what I am picturing is some sort of metal wire that connects the two jumper points where I hold them on the jumpers while powering on the laptop. Laptop Tech Support 1 Dec 27, 2021 S Question Need advice on what RAM upgrade to get. While Tom's does not allow questions on bypassing security like BIOS password, I can tell you that the image you posted is not the "WLAN Door" but is the RAM chip. What is best to use as an electrical conductivity tool and where would I get one? Use an electric conductivity tool to short the two points of the HW Gap. My friend has an Acer Aspire 5532 laptop (circa 2009). You should also be able to use the restore partition if there is one to set the thing to factory defaults. If the system won't boot to the optical drive you can try a USB stick with the Windows setup on it (plenty of instruction out there how to make one). Laptop LCD monitor doesn't work with one laptop but will work on the other laptop. Previous Next Sort by votes Hey there awesome techies!! First, I'm an old standard desktop pc tech. Serial Number or Part Number not found. I don't know how to short jumpers on a laptop with a metal instrument. (standard "user" who did not be careful and had minimal anti virus.) At any rate, I agreed to help, just thinking I could do a simple rebuild. this is from the service manual Removing BIOS Passwords: To clear the User or Supervisor passwords through hardware, open the WLAN door and use a metal instrument to short the J1 jumper . Plug in AC, keep the short condition on the HW Gap, and press Power Button to power on the system till BIOS POST finish. other instructions say: 4. Please try again later. Before I attempt this, I want to ensure I have all the tools I need. However, the BIOS is locked with an unknown password, and I can't boot to the CD/DVD.
